

## 3-12 完成注册超级管理员功能（移动端）

---

140.143.132.225:8000/project-1/doc-43

### 一、前端验证功能

---

向后端提交数据之前，我们先要做好前端的数据验证，比如说验证激活码必须是6位数字。

```
1. let that = this;
2. if (that.registerCode == null || that.registerCode.length == 0) {
3.     uni.showToast({
4.         title: '邀请码不能为空',
5.         icon: 'none'
6.     });
7.     return;
8. }
9. else if (/^[0-9]{6}$/.test(that.registerCode) == false) {
10.    uni.showToast({
11.        title: '邀请码必须是6为数字',
12.        icon: 'none'
13.    });
14.    return;
15. }
```

### 二、提交Ajax请求

---

```
1. let data = {
2.     code: code,
3.     nickname: nickName,
4.     photo: avatarUrl,
5.     registerCode: that.registerCode
6. };
7. that.ajax(that.url.register, 'POST', data, function(resp) {
8.     let permission = resp.data.permission;
9.     uni.setStorageSync('permission', permission);
10.    //跳转到index页面
11. });
```
