

4-9 封装检测当天是否可以签到（Web层）

140.143.132.225:8000/project-1/doc-57

在 `com.example.emos.wx.controller` 包中，创建 `CheckinController` 类

```
1. @RequestMapping("/checkin")
2. @RestController
3. @Api("签到模块Web接口")
4. @Slf4j
5. public class CheckinController {
6.     @Autowired
7.     private JwtUtil jwtUtil;
8.     @Autowired
9.     private CheckinService checkinService;
10.    @GetMapping("/validCanCheckIn")
11.    @ApiOperation("查看用户今天是否可以签到")
12.    public R validCanCheckIn(@RequestHeader("token") String token) {
13.        int userId = jwtUtil.getUserId(token);
14.        String result = checkinService.validCanCheckIn(userId, DateUtil.today());
15.        return R.ok(result);
16.    }
17. }
```
